ACCOUNTING ANALYTICS CAPSTONE PONTIAC LAND GROUP

P

About Pontiac is a property developer and operator based in Singapore, owning properties such as Capella and The Ritz-Carlton. With over 60 years of **Pontiac**: experience in luxury property development, they seek to better the built environment through holistic approach to development and management.

Key Performance

Metrics

Problem Statement

- Pontiac Land has <u>multiple properties</u> which generates <u>a lot of data</u>
- Due to this, it is <u>difficult</u> and <u>time-consuming</u> for the Pontiac team to find the data needed to <u>explain</u> their <u>variances</u> and <u>spot</u> <u>meaningful trends</u> in their asset reports

Challenges Faced

- 1 Volume of Data
 - <u>Variety</u> of Properties
 - b <u>Large volume</u> of data generated by each property
- 2 Lack of Visualisation

Data Management

- Focus only on Colonnade
- Use <u>Power Query</u> to clean Financial Statements, Occupancy Rates and Rental Rates

What We Learnt

- To communicate more with the client
- To be more adaptable and learn new things
- <u>Understanding</u> the <u>reporting process</u> is <u>important</u> in generating meaningful work

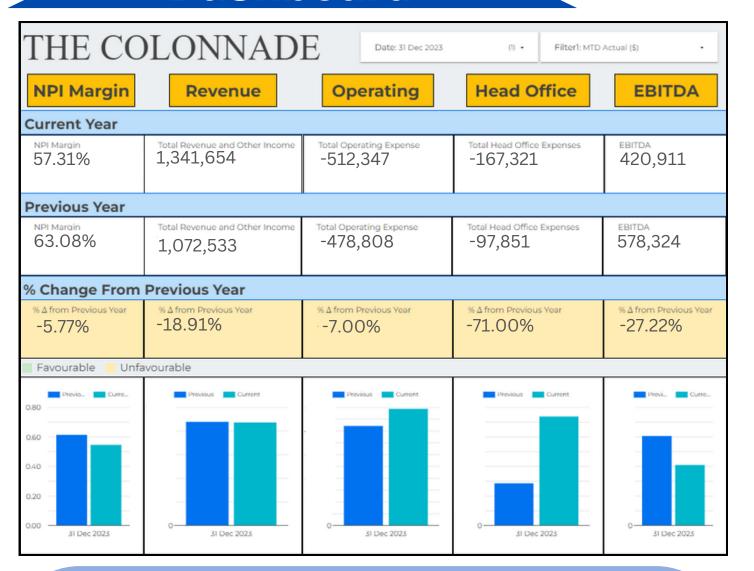

Special Thanks!

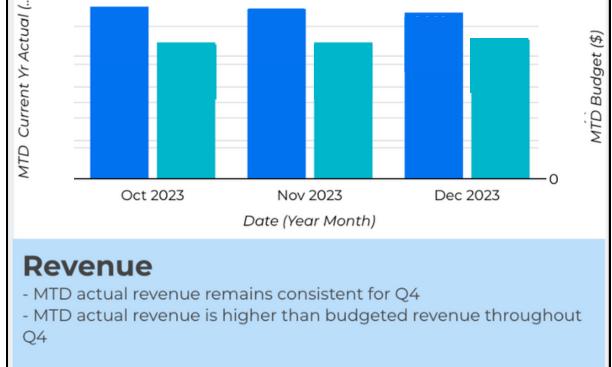

- Pontiac Land team, especially Qian Yu, Joycelyn, Fenyun, Shannon
- Prof Benjamin and Prof Clarence

Team members

Spencer Lim • Kaitlyn Hong • Seah Yu Xuan Tan Hui Teng • Chin Jia Tong

Dashboard

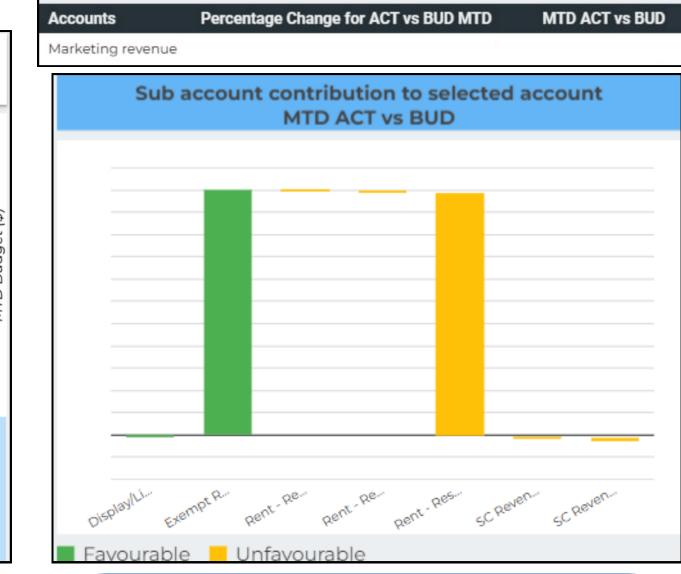

Date: 31 Oct 2023, 3...(3) ▼

Overview of performance (Revenue)

- Looker's 'optional metrics' enables better customization of comparisons for the report
- Allow insight into how the property is doing by <u>comparing</u> between current month's Year-To-Date <u>actual and budgeted value</u>

Breakdown of accounts (Marketing revenue)

- Shows what the selected account's <u>variance</u> <u>consists</u> of and its <u>values</u>
- Allows the users to see the <u>contribution</u> of <u>sub-accounts</u> to the account's variance

Display NPI Margin, Revenue, OPEX, Head Office Expense & EBITDA for ease of reference

Overview of Property

 Comparison between actual Month-To-Date/Year-To-Date data for <u>current and previous year</u>

Looker vs Tableau (Occupancy Rates) -

Looker (left)

- Shows the <u>actual versus budget</u> rate <u>across</u> the <u>two periods</u>
- <u>Calculated field</u> to show variances
- Cannot compare previous and current year

Tableau (right)

- Able to <u>replicate</u> Looker
- Can compare previous and current year
- Can <u>label</u> the <u>points directly</u> on the graph
